EQUIPMENT  
MAINTENANCE

We have efficient equipment that can meet your needs for metal sanding, and a paint booth that will handle your requirements in applying various types of paint.

PRO-MÉTAL PLUS current has a baking oven to improve efficiency 1000%. Instead of requiring 24 hours to dry paint on our parts produced here in the plant, drying now takes only 3 hours, improving efficiency. This is a great improvement in production for our team and a better delivery deadline for our customers.
